

GALVANISED IRON CLEANER

CODE:

GIC

Description:

A multi-purpose “semi paste” abrasive cleaning agent. Ideal for removing fabricator’s wax from galvanised iron. Ideal cleaner for removing soot and chalk from old epoxies and will provide a good key (because of its abrasive nature) for subsequent coatings.

Product Benefits:

Excellent abrasive cleaner for all non-ferrous metals and old epoxies. Supplied in semi-paste form for easy application. Washes off easily with water.

SURFACE PREPARATION:

Thoroughly mix/stir with flat paddle before use. Apply liberally with brush and allow to stand for 10 minutes. Rub/scrub vigorously with scouring pads/rags. Wash off residue with clean water. Repeat where necessary until a water-break free surface is achieved.

GENERAL:

Rubber gloves recommended to protect hands. Not suitable for ferrous metals.

APPLICATION:

Apply with brush. Thinning not required. Clean up with water.

TECHNICAL DATA:

Type:
Spread rate:
Pack Sizes:

Balanced blend of solvents, detergent and silica
+/- 15m² per litre depending on the galvanised iron.
1L & 5L

Health and Safety:
